

AL4100 & AL4300 Self Service Revaluing Stations

Key Function

The AL series of networked revaluing stations allow users to deposit cash in their account to top-up their Pcounter balance. Users can log on to their accounts either by swiping their card through the terminal or by typing in their details via the keyboard. Once money has been deposited, the revaluing software works with the accounting software to retrieve and update the users balance and display the amount of credit. These self service stations are available for use 24/7 and replace the need for staff to manually add credit.

Features

- Transaction details are recorded in the accounting software files
- The stations accept 6 denominations of UK coins including 5p, 10p, 20p, 50p, £1 and £2. The AL4300 also accepts notes of £5, £10 and £20
- A panel mounted keyboard and receipt printer are also available as optional extras

Benefits

- Also acts as card activation associating new cards to users accounts
- Upon activation of a new card, any old cards will be disassociated with the account, saving hassle in the event of lost cards
- Centralised payment stations for cashless environments
- Complete audit trails and comprehensive management reports available

The AL series Autoloaders

About ICS

Integrated Card Solutions Limited (ICS) is the leading supplier of print & copy control products in the UK. ICS offer a wide range of intelligent software, biometric and card-based solutions, including the proprietary XPR Enterprise® range. Together, these provide a single solution for outstanding print and copy management services, access control, photo ID (including full card encryption) and many cashless applications.

Established in 1996, ICS has a broad client base including 80% of all tertiary educational establishments in the UK, local government and NHS Trusts as well as many commercial enterprises.

Using the ICS XPR Enterprise® range in conjunction with carefully selected partners, our solutions provide

- Outstanding print and copy management
- Cashless environments including cash-on-card or account based systems
- Access Control
- Flexible Photo ID

These can be combined in a one-card solution, providing an easy-to-use, scalable and flexible system. Our clients report significant cost-savings after implementation, with enhanced management control and reporting

ICS print and copy management solutions

- Can reduce your print costs by between 20% and 50%
- Provide control of how, when and where documents are printed
- Provide easy-to-use management reports.

In addition, ICS employ a talented team of software developers and have delivered customised solutions to organisation across the UK.

Delivering the best solution for *your* needs, ICS work with the best partners and people from around the world.
