

Paycon 2 Smart Card Control

- A smart card payment and registration system.
- Value can either be stored direct on to the card or stored on the server.

Paycon 2: A Smart Card Payment & Registration System

- The PayCon2 solution has been developed to work with contact and non-contact (proximity) smart cards in cashless environments.
- The Paycon2 terminal is a stand-alone electronic payment and registration system.
- This system has been specifically designed for interfacing with almost every type and brand of copier or multifunctional device.
- The Paycon2 card system has been designed to work in two distinct operating modes; where value is stored on the server system or where value is stored on the card system.
- The smart cards can be programmed as ID only or as an E-purse card solution, the difference is the budget location.

- The Paycon2 smart card terminal is a system which functions as either a payment or a registration system for certain, closed environments.

- The Paycon2 system is ideal for all organisations where fixed users need to pay or be registered in order to access the photocopiers and printers.

- The Paycon2 is also suitable for organisations which operate in a cashless environment.

- The Paycon2 is ideal for schools, universities, offices and copy shops, where photocopying and printing is often unrestricted.

- In a situation where printing is free for all, most organisations find themselves needlessly losing hundreds and thousands of pounds in excess, unnecessary costs.

- The PayCon works seamlessly with other different back office modules such as DocuPRO, CashPRO and AccessPRO.

- Please contact ICS on the details below for further information on these software programmes.

Card Specification

- With the Paycon2 system you can decide on your own smart card technology; such as contact smart cards or contact-less smart cards like the MIFARE and Legic cards.

- You can pick a combination of both technologies if preferred.

Connectivity

- The Paycon2 terminal can be connected to just any make or model of photocopier or multifunctional device that's currently available.

- Due to its innovative design, 8 different price levels can be set - for example, A3 or A4, black/white or colour. (This is photocopier dependant).

Paycon2 Technical Specification

Dimensions: 8 x 10 x 23 cm.

Weight: 0.5 kg.

Interface: Opto coupler in- and outputs.

Display: Graphical, 2 line LCD display.

Power: 230 VAC via adapter.

Installation: Desk, stand or can be wall mounted.
