

HS600

Rechargeable Card Control System

Key Function

The HS600 is a secure and robust terminal that can be attached to any photocopier or printer requiring a payment solution. It is extremely flexible in offering different charging facilities for different user groups. It can offer up to 11 different card types each having up to 4 price categories (copier dependent).

For added security, individual PIN numbers can be set for each card use. Once a PIN number is set, the user will always be prompted to enter the PIN number before copying can commence.

HS600 Standalone Version

- User info is held in the memory bank of the terminal for charge back to cost centres
- Data can be collected via a hand held portable printer, read from the terminal screen or downloaded to a laptop PC
- Cards can be blocked from the system and PIN numbers can be used as extra security

HS600 Networked Version

- As well as all of the standard features above, the network terminal offers Ethernet TCP/IP connectivity
- All of the user information is polled back to a central PC over a structured network for reporting
- The ICS Copydata Management software is then utilised to run reports and block cards
- Copydata software also enables cards to be revalued "on-line" without the cardholder needing to return their card
- Polling of "off-line" terminals can be activated manually as required or at specific times set throughout the day

Specifications

Card Compatibility	MIFARE™, Secure Memory Contact Chip Cards (SLE4442) and Processor Cards. We can also advise on compatibility with existing bespoke card systems	Power	12v AC 500m Amp. Standard UK 240v 3 pin mains outlet is required
Dimensions	110mm wide x 200mm long x 60mm deep	IP Comms	Ethernet 10/100 base-T, with dual port hub 128 bit encrypted TCP/IP protocol

About ICS

Integrated Card Solutions Limited (ICS) is the leading supplier of print & copy control products in the UK. ICS offer a wide range of intelligent software, biometric and card-based solutions, including the proprietary XPR Enterprise® range. Together, these provide a single solution for outstanding print and copy management services, access control, photo ID (including full card encryption) and many cashless applications.

Established in 1996, ICS has a broad client base including 80% of all tertiary educational establishments in the UK, local government and NHS Trusts as well as many commercial enterprises.

Using the ICS XPR Enterprise® range in conjunction with carefully selected partners, our solutions provide

- Outstanding print and copy management
- Cashless environments including cash-on-card or account based systems
- Access Control
- Flexible Photo ID

These can be combined in a one-card solution, providing an easy-to-use, scalable and flexible system. Our clients report significant cost-savings after implementation, with enhanced management control and reporting

ICS print and copy management solutions

- Can reduce your print costs by between 20% and 50%
- Provide control of how, when and where documents are printed
- Provide easy-to-use management reports.

In addition, ICS employ a talented team of software developers and have delivered customised solutions to organisation across the UK.

Delivering the best solution for *your* needs, ICS work with the best partners and people from around the world.
